Supply Chain Engineering (International Series in Operations Research & Management Science)

Marc Goetschalckx

Supply Chain Engineering (International Series in Operations Research & Management Science) Marc Goetschalckx

The focus of *Supply Chain Engineering* is the engineering design and planning of supply chain systems. There exists a very large variety of supply chain system types, all with different goals, constraints, and decisions, but a systematic approach for the design and planning of any supply chain can be based on the principles and methods of system engineering. In this book, author Marc Goetschalckx presents material developed at the Georgia Tech Supply Chain and Logistics Institute, the largest supply chain and logistics research and education program in the world.

The book can be roughly divided into four sections. The first section focuses on data management. Since most of planning and design requires making decisions today so that supply chain functions can be executed efficiently in the future, this section introduces forecasting principles and techniques. The second section of the book focuses on transportation systems. First, the characteristics of transportation assets and infrastructure are shown. Then four chapters focus on the planning of transportation activities depending on who controls the transportation assets. The third section of the book is focused on storing goods, and the last section of the book is focused on supply chain systems that consider simultaneously procurement, production, and transportation and inventory as well as the design of the supply chain infrastructure or network design.

In each chapter, first a model of the process being studied is developed followed by a description of practical solution algorithms. More advanced material is typically described in appendices. This makes it possible to use an integrated, breath-first treatment of supply chain systems by using the initial material in each chapter. A more in depth treatment of a specific topic or process can be found towards the end of each chapter. End-of-chapter exercises are included throughout.

This text is suitable for several target audiences. The first target is a course for upper-level undergraduate students on supply chains. The second target is the use in a capstone senior design project in the supply chain area. The third target is an introductory course on supply chains either in a master of engineering or a master of business administration program, and the final audience consists of students attending logistics or supply chain post-graduate or continuing education courses.

From reader reviews:

Regina Rodgers:

What do you with regards to book? It is not important along? Or just adding material when you need something to explain what the one you have problem? How about your free time? Or are you busy individual? If you don't have spare time to try and do others business, it is give you a sense of feeling bored faster. And you have free time? What did you do? Every individual has many questions above. They have to answer that question since just their can do that will. It said that about e-book. Book is familiar in each person. Yes, it is right. Because start from on guardería until university need this kind of Supply Chain Engineering (International Series in Operations Research & Management Science) to read.

James Rose:

This Supply Chain Engineering (International Series in Operations Research & Management Science) are reliable for you who want to be described as a successful person, why. The reason of this Supply Chain Engineering (International Series in Operations Research & Management Science) can be one of the great books you must have will be giving you more than just simple studying food but feed you with information that perhaps will shock your earlier knowledge. This book is handy, you can bring it almost everywhere and whenever your conditions at e-book and printed ones. Beside that this Supply Chain Engineering (International Series in Operations Research & Management Science) forcing you to have an enormous of experience such as rich vocabulary, giving you tryout of critical thinking that could it useful in your day task. So , let's have it appreciate reading.

Deborah Tate:

That publication can make you to feel relax. This specific book Supply Chain Engineering (International Series in Operations Research & Management Science) was colourful and of course has pictures on there. As we know that book Supply Chain Engineering (International Series in Operations Research & Management Science) has many kinds or category. Start from kids until youngsters. For example Naruto or Detective Conan you can read and believe you are the character on there. Therefore not at all of book usually are make you bored, any it offers up you feel happy, fun and rest. Try to choose the best book to suit your needs and try to like reading which.

Doug Campbell:

What is your hobby? Have you heard in which question when you got scholars? We believe that that problem was given by teacher for their students. Many kinds of hobby, Every individual has different hobby. And you also know that little person including reading or as studying become their hobby. You need to understand that reading is very important and book as to be the factor. Book is important thing to add you knowledge, except your personal teacher or lecturer. You see good news or update regarding something by book. Many kinds of books that can you choose to use be your object. One of them are these claims Supply
