Essential Cytometry Methods (Reliable Lab Solutions)

Cytometry is characterization and measurement of cells and cellular constituents, most often used to immunophenotype cells - that is, to distinguish healthy cells from diseased cells. Flow Cytometry specifically is quite sensitive, allowing researchers to detect rare cell types and residual levels of disease, and as such has been the method of choice for important studies such as monitoring the blood of AIDS patients. For this reason, there is a great need for a practical, comprehensive manual that will be useful across a broad range of laboratories. This volume, as part of the Reliable Lab Solution Series, delivers such a tool, offering busy researchers across many disciplines a handy resource of all the best methods and protocols for Cytometry to use at the bench.
