## The South China Sea: Paleoceanography and Sedimentology (Developments in Paleoenvironmental Research)

Pinxian Wang and Qianyu Li The South China Sea (SCS) (Fig. 1. 1) offers a special attraction for Earth scientists world-wide because of its location and its well-preserved hemipelagic sediments. As the largest one of the marginal seas separating Asia from the Pacific, the largest continent from the largest ocean, the SCS functions as a focal point in land-sea interactions of the Earth system. Climatically, the SCS is located between the Western Pacific Warm Pool, the centre of global heating at the sea level, and the Tibetan Plateau, the centre of heating at an altitude of 5,000m. Geomorphologically, the SCS lies to the east of the highest peak on earth, Zhumulangma or Everest in the Himalayas (8,848m elevation) and to the west of the deepest trench in the ocean, Philippine Trench (10,497m water depth) (Wang P. 2004). Biogeographically, the SCS belongs to the so-called "East Indies Triangle" where modern marine and terrestrial biodiversity reaches a global maximum (Briggs 1999). Among the major marginal sea basins from the west Pacific, the SCS presents some of the best conditions for accumulating complete paleoclimatic records in its hemipelagic deposits. These records are favorable for high-resolution paleoceanographic studies because of high sedimentation rates and good carbonate preservation. It may not be merely a coincidence that two cores from the southern SCS were among the first several cores in the world ocean used by AMS C dating for high-resolution stratigraphy (Andree et al. 1986; Broecker et al. 1988).

### **From reader reviews:**

#### **Horace Godbolt:**

Book will be written, printed, or descriptive for everything. You can realize everything you want by a publication. Book has a different type. As it is known to us that book is important point to bring us around the world. Alongside that you can your reading proficiency was fluently. A reserve The South China Sea: Paleoceanography and Sedimentology (Developments in Paleoenvironmental Research) will make you to possibly be smarter. You can feel much more confidence if you can know about almost everything. But some of you think this open or reading a book make you bored. It is not make you fun. Why they are often thought like that? Have you seeking best book or ideal book with you?

#### **James Sellers:**

The book The South China Sea: Paleoceanography and Sedimentology (Developments in Paleoenvironmental Research) can give more knowledge and also the precise product information about everything you want. So just why must we leave a good thing like a book The South China Sea: Paleoceanography and Sedimentology (Developments in Paleoenvironmental Research)? A number of you have a different opinion about book. But one aim that book can give many information for us. It is absolutely suitable. Right now, try to closer with the book. Knowledge or data that you take for that, it is possible to give for each other; you could share all of these. Book The South China Sea: Paleoceanography and Sedimentology (Developments in Paleoenvironmental Research) has simple shape but you know: it has great and massive function for you. You can seem the enormous world by open up and read a guide. So it is very wonderful.

#### **Shawn Martinez:**

This The South China Sea: Paleoceanography and Sedimentology (Developments in Paleoenvironmental Research) are reliable for you who want to become a successful person, why. The main reason of this The South China Sea: Paleoceanography and Sedimentology (Developments in Paleoenvironmental Research) can be among the great books you must have will be giving you more than just simple examining food but feed a person with information that probably will shock your prior knowledge. This book is definitely handy, you can bring it all over the place and whenever your conditions at e-book and printed ones. Beside that this The South China Sea: Paleoceanography and Sedimentology (Developments in Paleoenvironmental Research) forcing you to have an enormous of experience for example rich vocabulary, giving you trial run of critical thinking that we realize it useful in your day pastime. So , let's have it appreciate reading.

#### **Mary Brott:**

People live in this new morning of lifestyle always try to and must have the extra time or they will get lot of stress from both daily life and work. So , when we ask do people have time, we will say absolutely yes. People is human not really a robot. Then we question again, what kind of activity are there when the spare

time coming to you actually of course your answer will probably unlimited right. Then do you ever try this one, reading ebooks. It can be your alternative inside spending your spare time, typically the book you have read is actually *The South China Sea: Paleoceanography and Sedimentology (Developments in Paleoenvironmental Research)*.
