Geocomputation: A Practical Primer

Geocomputation: A Practical Primer

"Brunsdon and Singleton offer a unique contribution to the zeitgeist of geocomputation... The authors offer a wide array of applications brought by leading scholars in the field of Geographic Information Science, spatial analysis and spatial modelling. The role of new techniques that are revolutionizing the usage of geocomputation is well explored and the systematic approach the book adopts in envisioning available tools is appropriately constructed. This book is a great contribution for an advancing field, and a much welcomed achievement for the growth of a new kind of spatial science."

- *Eric Vaz Director of the Laboratory for Geocomputation, Ryerson University*

Geocomputation is the use of software and computing power to solve complex spatial problems. It is gaining increasing importance in the era of the 'big data' revolution, of 'smart cities', of crowdsourced data, and of associated applications for viewing and managing data geographically - like Google Maps. This student focused book:

- Provides a selection of practical examples of geocomputational techniques and 'hot topics' written by world leading practitioners.
- Integrates supporting materials in each chapter, such as code and data, enabling readers to work through the examples themselves.

Chapters provide highly applied and practical discussions of:

- Visualisation and exploratory spatial data analysis
- Space time modelling
- Spatial algorithms
- Spatial regression and statistics
- Enabling interactions through the use of neogeography

All chapters are uniform in design and each includes an introduction, case studies, conclusions - drawing together the generalities of the introduction and specific findings from the case study application – and guidance for further reading.

This accessible text has been specifically designed for those readers who are new to Geocomputation as an area of research, showing how complex real-world problems can be solved through the integration of technology, data, and geocomputational methods. This is the applied primer for Geocomputation in the social sciences.

From reader reviews:

Carolyn Fletcher:

Have you spare time for a day? What do you do when you have a lot more or little spare time? Yep, you can choose the suitable activity with regard to spend your time. Any person spent their very own spare time to take a walk, shopping, or went to the Mall. How about open or maybe read a book allowed Geocomputation: A Practical Primer? Maybe it is to become best activity for you. You understand beside you can spend your time with your favorite's book, you can smarter than before. Do you agree with the opinion or you have different opinion?

Melissa Jackson:

This Geocomputation: A Practical Primer book is simply not ordinary book, you have after that it the world is in your hands. The benefit you get by reading this book is information inside this book incredible fresh, you will get data which is getting deeper a person read a lot of information you will get. This specific Geocomputation: A Practical Primer without we comprehend teach the one who looking at it become critical in contemplating and analyzing. Don't possibly be worry Geocomputation: A Practical Primer can bring if you are and not make your tote space or bookshelves' turn into full because you can have it in the lovely laptop even cellphone. This Geocomputation: A Practical Primer having fine arrangement in word in addition to layout, so you will not feel uninterested in reading.

Anthony Vice:

In this age globalization it is important to someone to get information. The information will make a professional understand the condition of the world. The fitness of the world makes the information easier to share. You can find a lot of referrals to get information example: internet, newspapers, book, and soon. You can observe that now, a lot of publisher in which print many kinds of book. The book that recommended for you is Geocomputation: A Practical Primer this reserve consist a lot of the information with the condition of this world now. This kind of book was represented just how can the world has grown up. The terminology styles that writer use to explain it is easy to understand. The writer made some research when he makes this book. That is why this book appropriate all of you.

James Jones:

That reserve can make you to feel relax. That book Geocomputation: A Practical Primer was multi-colored and of course has pictures on there. As we know that book Geocomputation: A Practical Primer has many kinds or style. Start from kids until youngsters. For example Naruto or Detective Conan you can read and think you are the character on there. Therefore , not at all of book are generally make you bored, any it offers you feel happy, fun and unwind. Try to choose the best book for you and try to like reading that will.
